- Maintenance

Glass installation training

For technical operating staff

Büchi glass pilot plants are built for durability and reliability in the chemical and pharmaceutical industries. Designed to meet the latest industry standards and regulations, our systems ensure long-lasting performance.

With our specialized training, we provide you with the knowledge and skills needed to service and maintain your glass plant independently. Gain hands-on experience in glass plant engineering, covering essential maintenance tasks and best practices.

The unique buchiflex flexible glass joint facilitates the maintenance of our glass plants and greatly reduces downtime. Maintenance of our glass plants as well as other subjects will be reviewed and trained as practical hands-on examples.

The following topics are included in the instruction:

- Glass catalog, products and material
- Glass construction training at training facilities
- ATEX
- Automation

Special trainings for maintenance of shell and tube heat exchangers etc. will be held upon request.

Location	at Büchi AG in Uster, close to Zürich
Cost	CHF 850.00, incl. training documents and meals
Duration	2 days

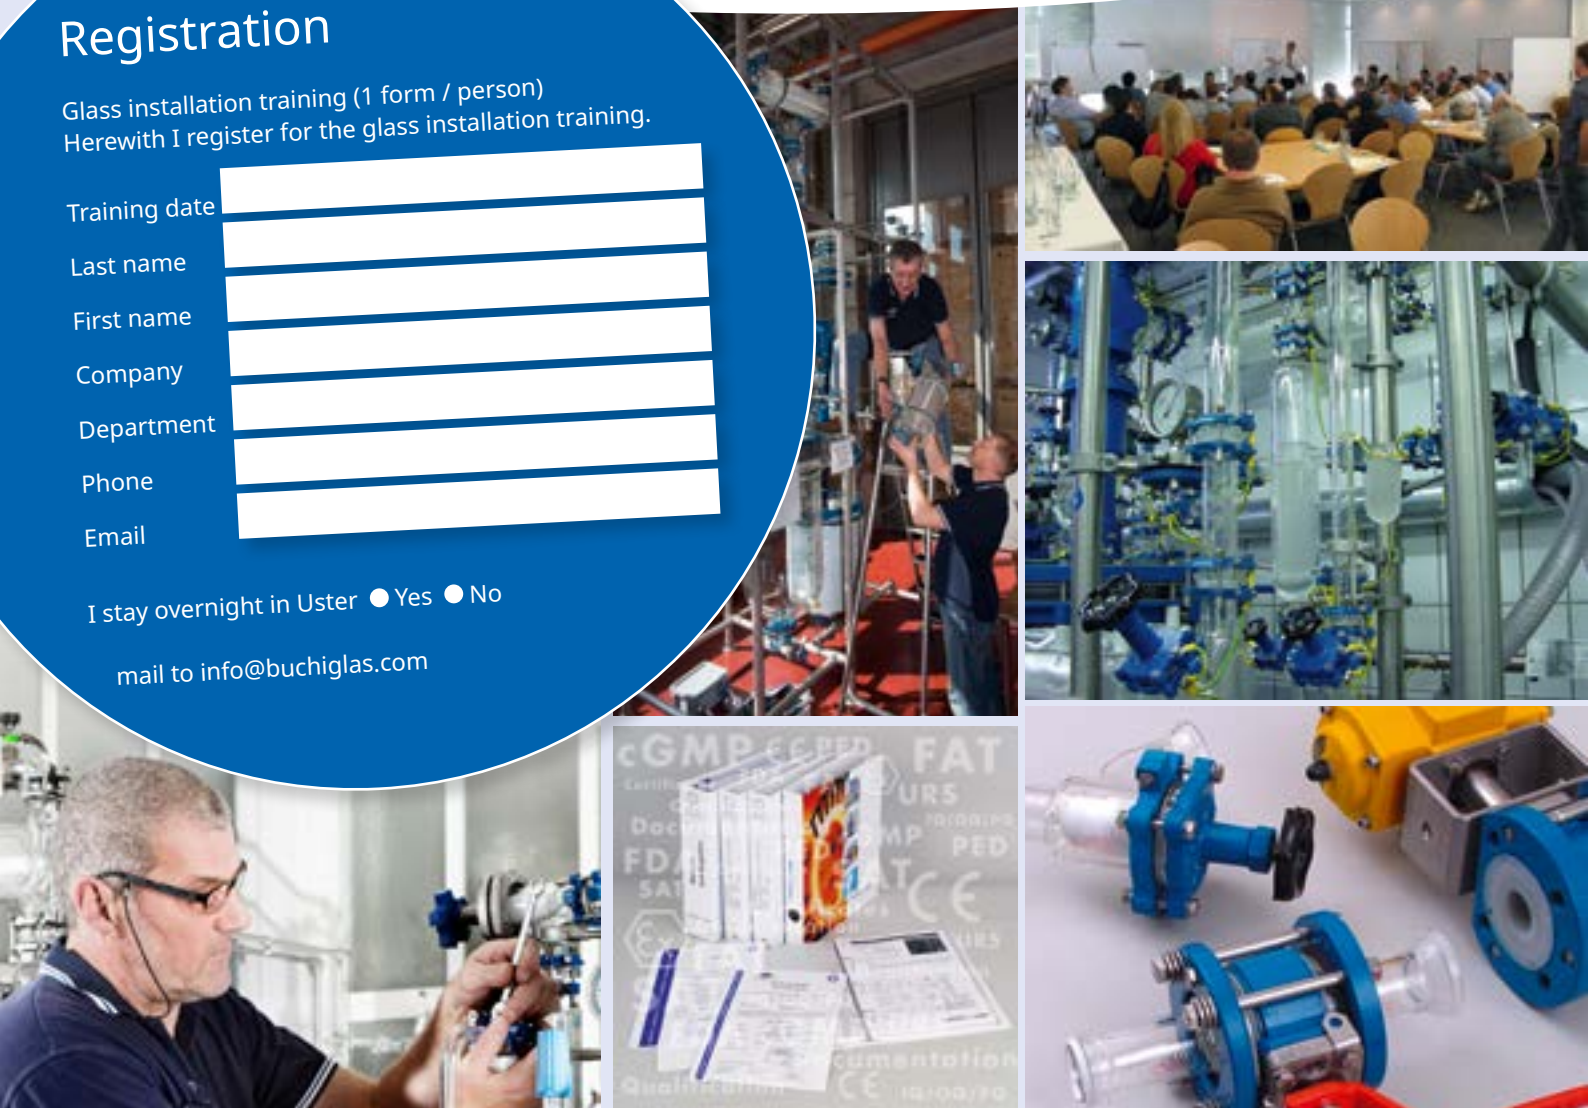

Registration

Glass installation training (1 form / person)
Herewith I register for the glass installation training.
